

## 35 dedicated programming interface

### 35.1 Overview

The FM33LC0XX chip can be programmed using a dedicated programmer provided by Fudan Microelectronics, or by downloading user programs through the Bootloader.

The device communicates with the chip through a dedicated programming interface (SWD) to complete program download and perform checksum verification on the entire Flash space content.

Test.

### 35.2 Programmer Use

For instructions on how to use the programmer, please refer to the application manual or contact Fudan Microelectronics Corporation.
